

Perform Affine Transformation on the given image using python and Open CV

Code:

```
import cv2

import numpy as np

from google.colab.patches import cv2_imshow

from google.colab import files

# Upload image

uploaded = files.upload()

# Read image

img = cv2.imread(list(uploaded.keys())[0])

# Image size

rows, cols, ch = img.shape

# Define points for affine transformation

pts1 = np.float32([[50,50], [200,50], [50,200]])

pts2 = np.float32([[10,100], [200,50], [100,250]])

# Transformation matrix

matrix = cv2.getAffineTransform(pts1, pts2)

# Apply affine transformation

result = cv2.warpAffine(img, matrix, (cols, rows))

# Display images

print("Original Image")

cv2_imshow(img)

print("Affine Transformed Image")

cv2_imshow(result)
```

Output:

Original Image

Affine Transformed Image
